EX.NO: 09	MAXIMUM OF N ELEMENTS USING GENERIC
DATE:20-09-2019	FUNCTION

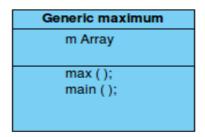

AIM: To develop a java program for the maximum value from the given type of element using a generic function.

REQUIREMENT: To find the maximum value from the given type of element using Generic function.

ALGORITHM:

```
STEP 1: Create a package called as maximum. STEP 2: Create a class GenericMaximum. STEP 3: Declare a method with initial attributes. STEP 4: Apply a suitable condition loop to it. STEP 5: Declare a object in it. STEP 6: Print the result.
```

CLASS DIAGRAM:

PROGRAM:

```
m=e;
                     }
                }
                return m;
       }
       public static void main(String[] args) {
              Integer[] intArray = \{6,4,8,9\};
              Integer intMax;
              Double[] doubleArray = \{1.1,6.4,8.9,3.0\};
              Double doubleMax;
              String[] stringArray = {"neha","gowri","hari","rushi"};
              String strMax;
              intMax=GenericMaximum.Max(intArray);
              System.out.println("Integer Max="+intMax);
              strMax=GenericMaximum.Max(stringArray);
              System.out.println("String Max="+strMax);
              doubleMax=GenericMaximum.Max(doubleArray);
              System.out.println("Double Max="+doubleMax);
       }
}
OUTPUT:
Integer Max=9
```

String Max=rushi
Double Max=8.9

RESULT: Thus the java console application to find the maximum value of the given data type is developed.
